

Agitators

Mechanical agitators with an electric motor, reducer and different mixing arms, depending on the customer, the type of work and the use of (our experience will help in the selection of the optimal solution)

Centrifugal pumps freestanding

Vertical pumps stand made of stainless steel inox, stainless partially approved to immerge. Available in various sizes and capacities, equipped with a motor and impeller with high efficiency in order to maintain a uniform flow devoid of pulsations.

Spare parts and accessories

Spare parts for the pumping and mixing device such: as pump housings, rotors, motors, reducers, mixing arms, etc. and the accessory in the form of different kinds of filters (magnetic, magneto-mesh)

AGITATORS • PUMPS • ACCESSORIES

MIXING TANKS,
AGITATORS,
SIEVES, PUMPS
FOR THE CERAMICS, CHEMICAL
AND FOOT SECTOR

Mixing tank with a mechanical stirring

All materials in contact with the mixed substance are made of stainless steel, available in three standard models 210, 124, 265lt. They are equipped with two motors, a centrifugal pump and a stirrer, whose type depends on the substances to be mixed.

MIXING TANKS

Mobile set for unloading the mill with electric pump

Made from stainless steel, specially designed to pump liquids production lines. It is equipped with a vibrating sieve, and a pump with the tank bottom. Practical by placing on wheels that allow instant movement. Also available for unloading the mills in the ceramic sector with an electric pump or pneumatic.

Mixing tank with an internal recirculation

Applied directly to the line, maintains the slurry with constant parameters through the use of a centrifugal pump (internal recirculation mixing by forcing excess pump performance). Practical thanks to wheels allows easy movement, available in 6 different sizes: 500lt, 600lt, 800lt, 900lt, 1000lt, 1200LT

Vibrating sieve 600

Vibrating sieve for fluid substances of stainless steel inox AISI 304L developed for screening liquids, available in 1 to 3 different levels of density grid, includes a vibration motor of a power 0.42KM

Mixing tank "eight"

Mixing tank for liquids with AISI 304 stainless steel with trolley allowing for easy mobility. As additional equipment for fast pump vertical distribution of the product.

VIBRATING SIEVE

Vibrating sieve to liquid substances

Vibrating sieve to liquid substances, permanent and bulk materials in stainless steel AISI 304L, available in both single and two-level with different density grid with power 0:52 - 2.75kw
